Professional Summary

Results-oriented Software Engineer with 5+ years of hands-on experience in designing, developing, and deploying scalable backend systems using Node.js and MongoDB. Adept at creating robust RESTful APIs, integrating third-party services, and collaborating cross-functionally to drive product delivery. Proven track record of enhancing application performance and maintaining high code quality through comprehensive documentation, unit testing, and code reviews. Seeking a challenging role in a product-based company where I can leverage my technical expertise to build impactful solutions.

Technical Skills

Languages	:	JavaScript
Backend	:	Node.js (Express.js)
Databases	:	MongoDB
Caching	:	Redis
API Design	:	RESTful APIs, JWT Authentication
Cloud	:	AWS (EC2, S3, Lambda, API Gateway, IAM, CloudWatch, SQS - Learning and Hands-on)
DevOps	:	CI/CD (GitHub Actions)
Testing	:	Unit Testing, TDD
Tools	:	Git, Postman

Experience

Senior Software Engineer — Feb 2025 – Present
Yellow.ai — *Remote – Bengaluru*

- Led the architecture and development of complex backend services handling high-volume traffic and transactions.
- Reduced API latency by 35% by implementing Redis caching, query optimization, and async processing
- Mentored junior developers and conducted regular code reviews to maintain code quality and onboarding efficiency.
- Designed reusable middleware and service layers to improve development efficiency
- Improved system performance and reduced database load through caching strategies

Software Engineer — Jun 2020 – Feb 2025
Yellow.ai — *Remote – Bengaluru*

- Built scalable REST APIs using Node.js and Express
- Improved response times by 25% through query optimization and efficient API design
- Designed MongoDB schemas and implemented indexing for performance improvements
- Collaborated with cross-functional teams to deliver end-to-end features
- Wrote unit tests and maintained documentation for better maintainability

Education

Lovely Professional University Punjab
B.Tech (Computer Science Engineering) *July 2016 – May 2020*

Projects

Ride-Sharing APIs *Node Js, MongoDB, Express.js, Swagger* Source Code

* Developed fully backend-focused APIs for a ride-sharing platform system. Implemented user authentication, ride management, and real-time data handling using Node.js and MongoDB.
* Created API documentation with Swagger for all endpoints, enabling seamless integration with potential frontend or client teams.
* Deployed the backend live, supporting real-time operations, without any frontend work.
* Focused on performance optimization, secure data handling, and modular API design.

Bajaj Allianz Chatbots *Node.js, MongoDB, JavaScript, Express* Link

* Created a chatbot using Node.js and Dialogflow integrated across WhatsApp, website, and Google Business Messages.
* Developed REST APIs supporting CRUD operations and NLP features.
* Enabled sentiment analysis and platform integrations, improving user engagement by 40 percent

Key Achievments

- Improved API response time by 35% through caching and DB optimization
- Enhanced system performance for high-traffic applications
- Mentored team members and improved development practices
